

<http://www.teachersdomain.org/resource/tdc02.sci.life.gen.creatednafingerprint/>

1. Copy and paste this web address onto your search bar
2. It should bring you to "Create a DNA Fingerprint"
3. Click view
4. Write a 1 paragraph summary of what you did and what you discovered. This should be a well written 7-9 sentence paragraph.
5. Read the background essay and complete the attached questions. This is a handout.

**\*\*\* This is due at the end of the hour\*\*\***

Some of the things that I learned in this activity were that using people's fingerprints is a very good way to identify a criminal. One of the other things that I learned in this activity was that there are many different steps to identifying person's fingerprints, in order to prove that they are the criminal. I think that the coolest thing that discovered was that there are more instruments involved than I thought that their were. I also discovered that there are many different types of liquids, and solvents used in the process of finding a persons fingerprints. I also discovered that determining a person's fingerprint is kind of like a puzzle; you need to do everything correctly if you want to find the persons finger prints. I very last thing that I discovered that using person's fingerprints to identify them is a very fool-proof way of finding the criminal.
